I'm a Product Designer with **+1 years of experience**, focused on creating useful, usable, and enjoyable products through data-driven design. I've worked across **diverse projects** to improve UX and visual quality, most recently **contributing as a product designer on a core product of my company** and collaborating closely with development and SEO-team to launch an MVP. I've also helped improve SEO team workflows by introducing a UI/UX review process, leading to better performance and higher client satisfaction. Now-I'm eager to focus on attractive products as a junior product designer to create meaningful, long-term impact.
